# 調整 SETTING

## 壓腳壓力調整:

安裝本皮帶式拖輪,需將壓腳壓力調輕減半(約6公斤)會使車縫更順暢,尤其是布料褲襠接縫的重疊處

Adjustment for presser foot pressure: When install the belt type puller, please adjust the presser foot pressure to be lesser to 50% (around 6 KGS) to easily sew over the lap seam in the crotch of trousers.

拉布皮帶的動作量應比送齒稍大,但差率太多時拉布皮帶則易磨損

The puller's feeding amount should be properly larger than feed dog's to procure even effect on sewn material. But if it is overmuch, either sewn material or pulling belt will be worn easily.

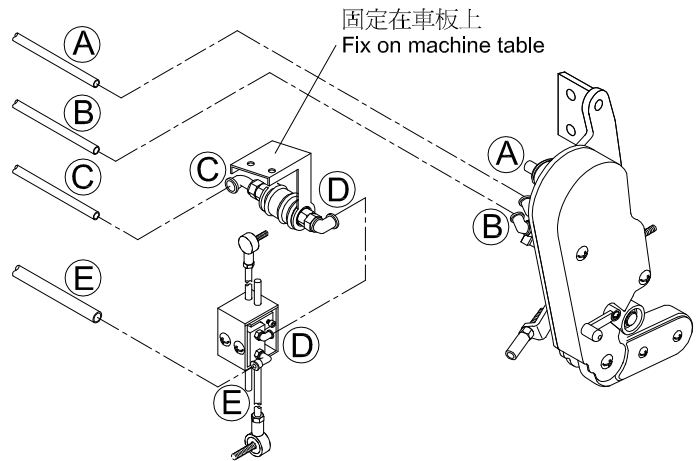

## PF-UB 管路圖 AIR HOSE PLUG DIAGRAM FOR PF-UB

適當的空氣壓力最高是4公斤  
The maximum proper air pressure is 4 Kgf/cm<sup>2</sup>

空氣壓力調整愈高,拉布的力量就愈大,縫製就愈順暢,產能也會愈高,而皮帶受力愈大,就愈容易磨損

The higher air pressure, the stronger pulling power and higher production efficiency, but the belt will suffer more strength to be worn easily.
